

**Below is a brief report on the products we use:**

### 1. Paper products

- Virgin paper used from managed forest for the manufacturing of paper.
- Recycled paper is 100% recycled.
- To reduce the cost of single-use plastics, Tsebo removed the plastic from our 1000 sheet toilet paper and placed it into paper bags.

### 2. Aerosols

- Plastic lid removed from cans to reduce plastic content. This will be replaced with a small sized cardboard board to protect the valve and nozzle only.
- Our dispenser range takes the larger and smaller can refills, which allows for a reduction in waste due to the size of the can.
- By removing the plastic cap on our 250 ml aerosol, we can reduce the single-use plastic by 10.6%.
- By removing the plastic cap on the 100 ml, we can reduce single-use plastics by 15%.

### 3. Hand soaps

- We have introduced re-usable and pumpless soap refills to reduce the plastic content of our sachets.
- Implementing this change has seen us reduce plastic content by 56.5%.

### 4. Hygiene dispensers

- All equipment is made from polypropylene and ABS plastic.
- Any damaged or unsalvageable dispensers are sent to a plastic recycling plant.

### 5. Batteries

- All old batteries used for dispensers are sent for recycling.
